TECHNICAL DATA

Low Expansion Borosilicate Glass

From the 16th century to, today, chemical research teams have used glass containers for a very basic reason the glass container is transparent, almost invisible. And so the contents and the reaction are clearly visible. But because always adequate for laboratory works. Laboratory works requires apparatus made in a glass, which can readily be moulded into any desired shape or form, which offers maximum inertness when in contact with the widest range of chemical substances, which can withstand thermal shock with fracture and high temperature work without deforming, and which will be resilient enough to survive the everyday knocks to which it will be subjected in normal laboratory handling, washing and sterilizing processes.

Chemical Composition

SGC Labs is a low alkali borosilicate composition. Its typical chemical composition is given under. It is virtually free of magnesia-lime-zinc group and contain only traces of heavy metals.

Percentage By Weight	
SiO ₂	81
B ₂ O ₃	13
Na ₂ O	4

In general the 'Strain point' should be regarded as the maximum safe operating temperature of SGC labs. When heated above 500° C the glass may acquire permanent stresses on cooling. All SGC Labs ware is annealed in modern ovens under strictly controlled conditions to ensure minimal residual stress in the products.

Chemical Durability

SGC Labs in highly resistance water, neutral and acid solutions, concentrated acids and their mixtures as well as to chloride, bromine, iodine, and organic matters. Even during extended period of reaction and at temperatures above 100° C, its chemical resistance exceeds tha of mot metals and other materials. It can withstand repeated dry and wet sterilisation without surface deterioration and subsequent contamination. Resistance to attack of various chemicals is shown under. Only hydrofloric acid, very hot phosphoric acid and alkaline solutions increasingly attack the glass surface with rising concentration and temperature.

TECHNICAL DATA

Contact Chemical	Duration in hour	Loss in Wt. mg/m
Water distilled at 100°C	6	10
Water Vapour Steam at 121°C	1	75
Acid HCl	6	100
80% H ₂ SO ₄ at 130°C	12	140
Alkali - 1N soln. of Na ₂ CO ₃ boiling Infusion Fluids Isotonic	6	4000
NaCl(0.85%) 121°C	2.5	70
Glucose(5%)121°C	2.5	50

Water And Acid Resistance

The impact of acids and water on the surface of borosilicate glass is insignificant. Only a very small amount of monovalent ions is released into the surrounding medium at the beginning of the impact. Non-porous layers of silica gel is created gradually on the glass surface. The layer works as an inhibitor against the further influence of the surrounding medium. Hydrofluoric acid and hot phosphoric acid are the only exceptions from the above described mechanisms of impact of water and acids on the glass surface. Both acids prevent the creation of silica gel layer on the glass surface.

Fabrication With Borosilicate Glassware

Due to low expansion of glass and easy work ability, this glass can be shaped, formed, joined into complicated apparatus. It can be done even by an analyst in his own laboratory. He can keep on changing till he gets what he needs. In case where annealing in a controlled oven is difficult he can do so by flame annealing which is also a great advantage.

Optical Properties

Laboratory Glassware made from Borosilicate Glass shows no noticeable absorption in the visible region of the spectrum. It appears consequently clear and colourless.

Foreword

Very humbly, we present herewith our latest 2022-23 Catalogue. **SGCLABS** blown Laboratory Glassware are fabricated from low alkali borosilicate type .3.3 glass, having chemical composition S_2O_2 : 81%, B_2O_3 : 13%, Na_2O / K_2O : 4% Al_2O_3 : 2% approx by weight.

The thermal properties of glass are coefficient of Linear expansion $32.5 \times 10^{-7} / OC$, strain point : $515^\circ C$, Annealing Point: $5650C$, Softening Point: $820^\circ C$, Specific Heat: 0.2 and thermal Conductivity ($Cal/cm^3 / ^\circ C/Sec$): 0.0027:

It has been specially mentioned in our catalogue where any other type of glass is used. Viz. Quartz, Silica, borosilicate Neutral or Soda Glass etc.

This Catalogue-cum-Price list covers a wide range of apparatus required for colleges, Universities, Industries, Research & Development Organizations. To give you clear indication of what's being offered we have tried the maximum of illustrations and figures.

We are in this line of mouth blown glassware for more than Two decades Our workshop is fully equipped with modern and latest plant, machinery equipment and experienced staff. Quality is controlled by our experts at every step of manufacturing to maintain accuracy and perfectness. We can really offer you high class mouth blown products, equivalent to that manufactured anywhere in developed countries.

Our's is an ISO-9001-2015 Certified Company

We are also registered with N.S.I.C New Delhi as a Small Scale Unit

We also undertake to manufacture new apparatus according to customers specifications. All enquires for research are dealt with promptly

While placing your valued order, please mention our catalogue numbers, minimum Qty/Pack along with a short description.

In the end, we sincerely thank all patrons and clients. old and new, for their indulgent co-operation in the past. We on our turn fully assure that all enquiries and valued orders will receive our best prompt attentions, as usual

WATER DISTILLATIONS

05.522 "SGCLABS", Water Still comprises of a horizontal Borosilicate glass boiler fitted with a 3KW chromium plated immersion heater with cut off, double coil high efficiency condenser ensure a reliable output of single distillate. The still is fitted on a sheet metal epoxy coated stand, suitable for bench or wall mounting. For use on 220/240 V. 50/60 Hz single phase supply. As per picture. Distillate Output : 4 Liters/hr Approx, Ph : 5 to 6.5 Pyrogen free.

Note: ph, conductivity and sensitivity are affected by temperature and the presence of absorbed carbon dioxide. The basis of tests are at 20° C on distilled water free of carbon dioxide. Care is needed to obtain Pyrogen free water and the distillate must be tested before use. Pre treated input water (use of softener) is recommended for obtaining better results and to increase the still lif.

05.530 "SGCLABS", Water Stills are carefully designed to produce high purity pyrogen free distilled water. The water still of borosilicate glass comprises of horizontal type boiler, coil condenser, constant level device, Silica sheathed heaters, along with stand and clamps. All parts are replaceable.

KJELDHAL APPARATUS

16.1164 Universal Combined Kjeldhal Digestion and Distillation Unit "SGCLABS", Electrically heated, comprising of one single mild steel tubular stand provided with two shelves one above the other. A specially designed glass fume duct with 24/29. Cone openings (suitable for flasks having 24/29 socket) having such provision so that no leakage of fumes takes place. One heater box having individual energy regulators for 500 watts heaters are supplied in digestion part at the lower side. One heater box of above design is supplied in distillation part at the upper side. Distillation part is also provided with brass condenser rack with water circulation systems and clamps. The whole unit is operated on 220 volts AC mains.

17.1256 Bottle top Dispensers: All parts which comes in contact with reagents are made of PTFE, FEP and Borosilicate Glass. so can be used for all Laboratory Reagents dispensing needs. High accuracy and precision is ensured through several stages of strict quality checks during manufacturing. Each Dispenser is calibrated in accordance with ISO 8665 Standard, and supplied with certificate.

Product Information :

Piston	PTFE
Cylinder	Glass
Value Assembly	Glass
Volume adjustment	Screw Type
Delivery Tube	FEP
Inlet Tube	FEP
Compatibility	Excellent with all reagents except HF.

Each dispenser is supplied with 1 standard adapter of 30mm thread and 5 adapters of 28, 32, 36, 40 & 45mm. to fit in most of the reagent bottles in Laboratories.

Note : Instruments is fully autoclave able.

Features :

- Continous adjustment of pump speed during operation.
- Silicon collet suitable to hold firmly upto 100ml. pipettes.
- Membrane filter provided prevents Aerosol Contamination and liquid to enter the device.
- Rechargeable Ni-MH batteries used in combination with the low power circuit and Vacuum/Pressure Pump, allows 8 ht. continuous operation.
- Battery charge is provided with each piece.
- Two LEDs to show Low charging and charging status.
